Super Glue Corporation News: May 2014

Super Glue, Spaghetti, and Model Engineering

We came across this story from the University of the Sunshine Coast in Australia and thought it was a novel twist on the use of [Super Glue](#) for model making. Engineering students participating in the university's annual spaghetti bridge competition were given a challenging task: create the strongest platform possible using nothing but spaghetti, Super Glue, string, and a small aluminum ballast plate. The results were pretty creative.

Enter Title HereFun Recycled Bookmarks are a Cinch with Glue Tape

Our [Front Porch Treasures](#) line is the go-to place for all your crafting adhesive needs. We came across a fun craft that can help inspire your kids to read more and is good for the planet (we also think it's a great activity for adults, particularly those who love comic books). Building your own recycled bookmarks is easy, fun, and allows you to have a lot of bookmarks on hand without spending upwards of \$5 apiece on these essential reading aids at the local bookstore.

Super Glue Wood Varnish in Action

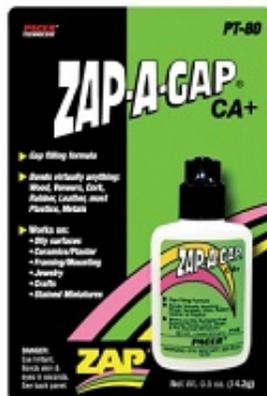

In a previous entry, we shared an easy way to give your wood a high-gloss shine and durable finish: Super Glue. Then we came across [this video](#), which shows the technique in action on a lovely wooden pen.

We think you could do even better (and save on paper towel waste) using our [Future Glue Brush-On](#) applicator. A liberal application of glue, in three successive coats, creates a one-of-a-kind shine for this hobbyist.

Getting Started: Tools for Drones, RC Airplanes, & Helicopters

There is so much in the news about drones and all of the different uses for them, from warfare to home delivery of packages, today. As with many “new concepts” this is actually just a new twist or extension of something hobbyists around the world have been involved with for decades. Remote Control (RC) Airplanes, Cars, and Helicopters have an entire industry and cult following that hobbyists have participated in

building, flying, and competing in enthusiastically over many, many years.

[Super Glue Corporation](#) has been working with these hobbyists, and collaborating along side of them, developing highly technical super glues, epoxies, threadlockers and a wide range of other adhesives specifically for their purposes, such as our [Zap adhesives](#).

[Read the full article](#) and [watch the video](#) if you're interested in getting started with building Drones, RC Airplanes & Helicopters.

Easy and Fun Bunny Craft for Kids

This bunny craft is sure to be a big hit with your little ones. All you need is our [Front Porch Treasures Foam Mounting Dots](#), a white plastic cup, pink and white foam, white pipe cleaners, googly eyes, a marker, and scissors. It's the ideal activity for toddlers, although you will need to handle the scissors and marker. We recommend using the Foam Mounting Squares instead of glue; they're safe for kids and there's no chance of spilling.
