Happy Easter – Happy Spring!

Ah! The signs of Spring are everywhere ... YAY! ... The snow is melting, new leaves are sprouting on the trees, flowers are blooming in the gardens, new baby birds are chirping away and of course, in many parts of our country, the winds are vigorously helping usher in the season ...

We love this seasonal Easter Egg anemometer (instrument for measuring wind force and speed). All it takes to make it is an inexpensive analog multimeter, some [super glue](#), and a few other supplies you probably already have, on hand, in your tool chest.

- [Super Glue Blog](#)

Here's a fun, competitive, project idea for creative engineer students of almost any age.

The challenge: Create the best (weight-bearing) engineered bridge, of any group, using:

- (20) 2 foot long pieces of balsa wood
- [Super Glue](#)*
- Cutting Knives*

*adult supervision required

The competition can be structured a variety of ways, but it is most fun when students are divided into teams, with two to four students on each team. The collaborative, synergy of the group often produces the best results.

Super Glue Makes Everyone Seem Handy!

We were chuckling when we read a recent post by Lynne, author of the [Stealing Mom blog](#). Lynne recounts in amazement how her “not a handyman” husband was able to repair several home projects in one day by using [super glue](#).

Here's how Lynne starts the story: “Scott called me at work to ask me where the Super Glue® was and he would not tell me why he wanted it. My heart dropped to my feet at the thought of what all he could do with glue in his hands. As I've already mentioned, he is not a handyman. These little home projects usually create havoc when he attempts them. Later in the day I met him at the Mall and he was actually giddy and boasting about some home projects that he had completed.”

Wolf Carving Sticks To Driftwood!

This gorgeous wolf carving is mounted on a finished piece of

driftwood found off the coast of Washington. The North Idaho Carver artist/blogger, Ed, says, "The wolf is pinned on the driftwood with brads and [super glue](#)."

Quite a beautiful piece — love it!
