Super Glue Corporation News: March 2013

Radio Control Hobbyists Launching Exciting Career Paths Via UAVs & Drones

Over five decades ago, our company [Pacer Technology](#) (aka [Super Glue Corporation](#)) established its roots as producers of hobby airplane kits (and the job-specific glues and [cyanoacrylates](#) used to build them). These kits transformed into radio-control (RC)airplanes, RC helicopters, and RC jets, and as such the adhesives used to construct and maintain them became more and more chemically challenging to formulate. We branched off to produce the complex [adhesives](#) while all along the way maintaining strong bonds with the hobbyists participating in this evolving industry.

cherished customers in Dallas, Texas. "Shirl" wrote in to tell us how [super glue](#) was able to repair one of her household treasures:

"Hi! I have a 'super glue testimonial' – I have a Lucite ice bucket that has a detachable lid. The lid fits into the bucket with a small Lucite fob. In my haste the other day the lid fell and the fob broke away from its 'place'. I used the glue and allowed it to dry and 'eureka'!!! it worked!!!! Is that good or what???"

Guess Super Glue Isn't The Only Way To Rescue RC Planes!

Excuse the language in this video entitled HELICOPTER FISHING, but we know our RC airplane enthusiasts will be blown away by this dramatic rescue video so we have to share it! [Super Glue](#) and RC (Radio Control) Airplane hobbyists have always had a strong bond largely due to [super glue's](#) ability to help with repairs in times of trouble, specifically crashes ... but this takes the term rescue to all new levels! Check it out as this helicopter team jumps in to retrieve the RC plane from the tree top! Whoa! Again, excuse the language!

Super Glue Making Health News for Multiple Uses!

An article by Sharon Worcester, in the January 2013 issue of [Skin and Allergy News](#) states “A [cyanoacrylate](#) adhesive-based implant is feasible, safe and effective for the treatment of [great saphenous vein](#) incompetence, according to 1-year follow up data from the first study of the product in humans..... Of 38 patients with an incompetent great saphenous vein who were treated with a proprietary formulation of cyanoacrylate adhesive (known as superglue), 100% demonstrated complete closure of the vein immediately and at the 48-hour follow-up, as measured using duplex ultrasound and clinical examination; after 1 year, 92% maintained complete closure, said Dr. Proebstle of Hirschberg, Germany.”

This amazing health news comes as no surprise to the makers of [super glue](#) at [Super Glue Corporation](#).
